

# GULLWING LABRADORS

## Vaccination Schedule

Date of Birth: January 6, 2006

### GullWing Labradors

Your puppy got its **DAPP** vaccinations at 8 weeks of age  
 Puppies generally receive a second series of shots at 12 weeks  
 and a third series at 16 weeks  
 Vaccination boosters are given at 1 year of age  
 Additional boosters are given at 4 years  
 and 7 years

Due Date	Done On
<i>March 3, 2006</i>	
<i>March 31, 2006</i>	
<i>April 28, 2006</i>	
<i>January 6, 2007</i>	
<i>January 6, 2010</i>	
<i>January 6, 2013</i>	

The pup should start on **heartworm** medication at 12 weeks  
 You can choose to give either daily or monthly treatments (both are available).  
 I recommend keeping them on it all year round.

<i>March 31, 2006</i>	
-----------------------	--

### Rabies vaccinations are required by law.

The initial rabies vaccination is given at 16 weeks  
 Vaccination boosters are given at 1 year of age  
 Additional boosters are given every 3 years thereafter...

<i>April 28, 2006</i>	
<i>January 6, 2007</i>	
<i>January 6, 2010</i>	

I have included a copy of the vaccination protocol from the *University of Colorado*. It has gained widespread acceptance and has replaced the old annual vaccination protocol, which has been found to be unnecessary and potentially harmful.

**Please do not take for granted that your veterinary hospital will tell you when and what to do. One person who got a Tulgeywood puppy born late Summer of 1992, was not advised by her veterinarian to begin the heartworm medication. When her puppy was tested for the presence of heartworm before the start of mosquito season in the Spring of 1993, they found the dog had become infected in the Fall of 1992. He had to undergo dangerous and potentially fatal treatment to destroy the heartworms. It cost the owner several hundred dollars and nearly broke her heart to see her little guy so sick.**
